

### Garage forecourt protection

Garage forecourts require a high level of security, due to the obvious dangers that come from the storage of highly combustible fuel, but also the vulnerable locations that they often are situated in. It is therefore important to ensure that the correct security measures are taken. Barricade Ltd offer anti-ram, high visibility hoops that are an ideal fixture on all garage forecourts and car parks. Barricade Ltd manufacture hoops and bollards in a variety of specifications and finishes at very competitive prices.

High visibility, heavy duty hoop barriers offer high levels of protection to the petrol pumps and shop fronts on forecourts.

Anti-ram bollards are also available for added garage forecourt security and shop fronts.

We also offer removable versions of our hoop barriers, as well as telescopic and anti-ram bollards available for added shop front and forecourt security.
