

The perils of smoking are well documented; despite this millions of people in the UK still smoke, and due to the smoking ban, smokers are only allowed to smoke in certain areas. The smoking shelter provides a designated smoking area for workers or revellers, and means that smokers no longer have to crowd in workplace doorways or outside of public houses to smoke.

The smoking shelter is manufactured from mild steel and plastic P.E.T cladding ensuring a sturdy and weather resistant shelter. Plastic cladding on the front, back, roof and sides of the shelter provides a wind-break, and a rain-proof designated smoking enclosure.

Dimensions / Options:-

- 2.1 metre (H) 3 metre (W) 1.5 metre (D)
- 50 x 50 mm mild steel box section frame
- 5 mm P.E.T glazing
- Strong, robust, weather resistant enclosure
- Galvanized to BS EN ISO 1461
- Full range of BS and RAL colours available corporate colour to suit the surrounding environment
- Optional litter bins / ashtrays can be added internally

The shelter is galvanised finished for weather resistance and may be finished in any standard BS or RAL colour. Optional litter bins or ashtray / cigarette disposal bins may be placed inside the shelter to prevent littering and ensure a clean and tidy designated smoking area.

As we are a steel fabrication company we are able to offer bespoke shelter designs and tailor the shelter exactly to our customer's requirements.

Please contact our sales team if you have any questions, or if you require any further information on our shelter systems.
